

AXXESS

**Innovative Revenue
Control Systems for
Leisure Centres**

Access is our business

The AXXESS-Concept

AXXESS provides operators of leisure parks with innovative and modular solutions for access control and tariff management. It is based on the latest computer and software technology and breaks new ground in many aspects. **AXXESS** is one of the first products consequently using the many options of the Internet.

- ▶ Automated data exchange between multiple sites, supporting centralised customer accounts.
- ▶ Centralised administration of revenue and tariffs from any geographic location
- ▶ Integrated video surveillance
- ▶ Administration and control of cashier systems from any computer with Internet access

Access-Media

ACCESS gives the operator the choice of the best suited access media and supports every established technology:

- ▶ **Barcode paper ticket:** Best suited for sporting facilities and public outdoor pools. Tickets are inexpensive and can easily be financed through sponsoring or advertisement.
- ▶ **Transponder coin:** The universal solution for public baths with sauna and spa.
- ▶ **Transponder bracelet:** Comfort for higher classed leisure centres and spas – ideal with electronic wardrobe locks.

Flexibility

The modular system allows the use in objects of any size and complexity. A large variety of devices is available, such as manual or automatic paystations, access readers, turnstiles as well as software modules for different applications. Thus, a perfect solution for any given project can be realised.

The modular software and hardware concept allows for the fast and affordable implementation of any specific customer request.

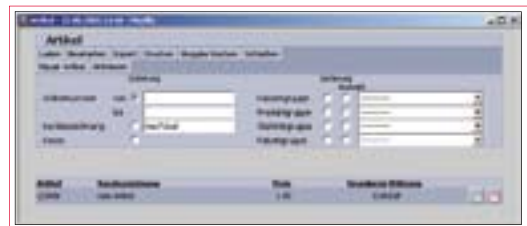

Tariffs

The comprehensive data management system integrated with **AXXESS** provides the operator with a powerful tool to set up and manage every common business cases and tariff models.

For this purpose, **AXXESS** supports the user with the following functions:

- ▶ Any number of tariffs and tariff structures may be used at the same time.
- ▶ Gastronomy sales and ticket sales are totally integrated.
- ▶ The tariff simulator allows testing new tariffs as well as revenue simulation against historic statistics data.
- ▶ The system calendar allows for specific adjustment to regional conditions (e. g. local holidays)
- ▶ Export function (Excel, PDF) available for all reports.
- ▶ Modifications to system data or tariffs can be effected through remote maintenance via Internet.

Cashier

AXXESS cash points are used via touch screen displays, which allows for a very intuitive usage. Thus, the optimum of flexibility and comfort is reached and the operator training is reduced to a minimum.

Apart from cash payment, **AXXESS** cashier systems accept a variety of cashless payment means. Such as popular debit or credit cards. This equally applies to cash points and automatic paystations.

Statistics / Reports

For the successive control of all commercial transactions an efficient reporting module is provided. The reporting system is operated through an Internet browser and can be used from any computer. Moreover there is no additional software required. Due to the Internet-enabled system platform data may be accessed from local area network (LAN) or from remote. In addition to displaying on the computer screen and printing on paper, all reports can be converted to a PDF file or, for further processing, exported to Microsoft Excel file format.
